HIGHLIGHTS OF QUALIFICATIONS

- Cybersecurity professional with 2+ years of experience in security operations and engineering within a Managed Security Services Provider (MSSP) environment, securing 12+ enterprise clients across financial services, technology, manufacturing, automotive, and critical infrastructure sectors.
- Published cybersecurity educator and course author, having developed and published five cybersecurity training courses on the LetsDefend.io platform covering malware analysis, reverse engineering, and threat detection methodologies.
- Proven expertise in SIEM, SOAR, and EDR technologies, with hands-on experience developing, tuning, and maintaining detection rules to improve threat visibility and reduce false positives.
- Experienced in security monitoring, threat hunting, and incident investigation across cloud, endpoint, identity, email, and network environments, leveraging telemetry from Microsoft 365, Google Workspace, Palo Alto Networks, Okta, Darktrace, Abnormal Security, and Obsidian Security.
- Contributed to the development, testing, and use-case refinement of Mjolnir Security's AI-driven security operations platforms, including Milind.AI (LLM-powered cybersecurity assistant) and MSOC (AI-powered autonomous SOC), helping improve automated threat detection and response.
- Strong background in malware analysis and digital forensics, including static and dynamic analysis, IOC extraction, behavioral analysis, and adversary mapping using the MITRE ATT&CK framework.

TECHNICAL SKILLS

SIEM & SOAR	Sumo Logic Cloud SIEM, Microsoft Sentinel, Splunk, Elastic, Sumo Logic SOAR
EDR / XDR / RMM	SentinelOne XDR, Microsoft Defender XDR, Wazuh, NinjaOne RMM
Network Security	Suricata, Security Onion, Darktrace, Palo Alto NGFW/GlobalProtect, Cisco Meraki MX
Analysis Tools	Ghidra, IDA Pro, x32dbg, Volatility, Autopsy, Velociraptor, Wireshark, TCPdump
Scripting & Detection	Python, PowerShell, Bash, Sumo Logic Query Language, KQL, SPL, YARA, Sigma
Platforms	Windows Server, Linux, Microsoft Azure, Hyper-V, VMware vSphere, VirtualBox
Networking	TCP/IP, DNS, DHCP, HTTP/S, SSL/TLS, VPNs, Routing & Switching
Certifications	CompTIA Security+, Cisco CyberOps Associate, Blue Team Level 1, SentinelOne SIREN, Sumo Logic Certified, ISC2 CC, Qualys VMDR, Microsoft AZ-900, SC-200 (In Progress)

PROFESSIONAL EXPERIENCE

SOC Analyst Level 3 – Security Engineering Focus

Dec 2025 – Present

Mjolnir Security MSSP, Toronto, ON, Canada

- Drive detection engineering and threat intelligence initiatives across 12+ enterprise clients, developing 50+ new security monitoring use cases and optimizing 40+ existing detection rules to improve coverage and reduce false positives.
- Conduct proactive threat hunting using threat intelligence, behavioral analytics, and the MITRE ATT&CK framework to identify malicious activity across endpoint, network, cloud, and identity environments.
- Conduct investigations into high-severity incidents by correlating telemetry across SIEM, EDR, and NDR platforms to determine scope, assess impact, and coordinate containment and remediation actions.
- Engineer and maintain detection capabilities across Sumo Logic Cloud SIEM, SentinelOne XDR, Microsoft Defender Suite, Suricata IDS/IPS, and Sumo Logic SOAR.
- Contribute to the development, testing, and use-case refinement of Mjolnir Security's AI-driven security operations platforms, including Milind.AI and MSOC (AI-powered autonomous SOC), improving automated threat detection and analyst investigation workflows.
- Mentor junior analysts through investigation reviews, detection engineering guidance, and knowledge-sharing sessions on emerging threats and security operations.

SOC Analyst Level 2

Oct 2024 – Dec 2025

Mjolnir Security MSSP, Toronto, ON, Canada

- Investigated and managed 250+ security investigations and escalations for clients across financial services, technology, manufacturing, automotive, and critical infrastructure sectors.
- Authored 48 threat intelligence briefs on emerging threats, vulnerabilities, and malware campaigns, enabling targeted threat hunts, detection updates, and informed client response.
- Developed Sumo Logic Cloud SIEM rules, Microsoft Defender custom detections, SentinelOne STAR rules, and YARA signatures to improve detection accuracy and enable proactive threat identification.
- Conducted malware analysis and IOC extraction from suspicious files, mapping adversary behavior to the MITRE ATT&CK framework and producing actionable investigation reports.
- Supported SOAR automation initiatives by designing and testing Sumo Logic playbooks to streamline repetitive incident investigation workflows.
- Delivered investigation findings and remediation guidance to clients, supporting timely containment and informed security decisions.

SOC Analyst Level 1

May 2024 – Oct 2024

Mjolnir Security MSSP, Toronto, ON, Canada

- Monitored and triaged security alerts across SIEM, EDR, IDS/IPS, cloud, email, and identity platforms within a 24/7 Managed Security Services Provider (MSSP) environment.
- Investigated and validated security events by correlating endpoint, network, authentication, email, and cloud telemetry, escalating confirmed threats to senior analysts in accordance with client SLAs.
- Performed endpoint and network threat analysis using SentinelOne XDR, Microsoft Defender for Endpoint, and Microsoft Sentinel to support threat detection and incident response activities.
- Assisted with threat detection tuning, incident documentation, and security operations processes across multiple client environments.

Cybersecurity Content Engineer

Jan 2024 – May 2024

LetsDefend.io, Remote | Contract

- Authored and published 5 cybersecurity training courses covering Static Code Analysis, Dynamic Code Analysis, Malware Obfuscation, Malware Anti-Analysis Techniques, and YARA-based Malware Detection on the LetsDefend.io training platform.
- Designed and developed 55 technical lessons, 115 assessment questions, 5 quizzes, and hands-on exercises spanning 18 hours of cybersecurity training content.
- Developed hands-on malware analysis labs using custom and real-world samples, giving learners practical experience in reverse engineering, threat detection, and incident investigation methodologies.
- Built analysis workflows and practical lab exercises using Ghidra, IDA Pro, Volatility, Velociraptor, and Autopsy, enabling hands-on reverse engineering, memory analysis, and forensic investigation.
- Translated complex malware behaviors and reverse engineering concepts into structured training material for cybersecurity learners and practitioners.

TECHNICAL PORTFOLIO

Malware Analysis – Unveiling a Trojan-Horse | Medium

- Published a technical malware analysis report detailing static and dynamic analysis, IOC extraction, YARA-based detection development, malware behavior analysis, attack techniques, and remediation recommendations.

Enterprise Network Security Lab | GitHub

- Designed and implemented an enterprise network security architecture featuring IPsec VPN, Cisco ASA firewall controls, AAA authentication, VLAN segmentation, ACLs, NAT, and OSPF routing, demonstrating defense-in-depth principles to secure communications and enforce network segmentation.

EDUCATION

Postgraduate Diploma – Cybersecurity & Wireless Networking

George Brown College, Toronto, ON, Canada | Apr 2024

Bachelor of Computer Applications

Mangalore University, Mangaluru, KA, India | Jun 2021
